

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

Claims 1-30 (cancelled)

31. (Currently Amended) A wireless communication system, comprising:  
at least one wireless terminal;  
an access point in wireless communication with the at least one terminal and forming part of a network;  
a server connected to the network;  
the at least one wireless terminal includes a selector for selecting objects so that selection information is transferred from the at least one terminal to the server;  
and wherein  
in response to the selection information being transferred from the at least one terminal to the server, the server responds back to the terminal with a page template containing localization and component parsing performed by the server before a response to the selection information is sent to the at least one terminal.

32. (Previously Presented) The wireless system according to claim 31, comprising:  
a connection from one of the access point and server to the Internet.

33. (Previously Presented) The wireless system according to claim 31, wherein:

at least one object menu icon is provided on a screen of the at least one wireless terminal each with an associated object.

34. (Previously Presented) The wireless system according to claim 33, wherein:

the at least one object menu icon is associated with a plurality of objects which are visible at the same time.

35. (Previously Presented) The wireless system according to claim 31, wherein:

the wireless terminal utilizes a focus marker around fields on a screen.

36. (Currently Amended) A method of selecting items on a screen of a terminal comprising:

providing a wireless terminal in communication with a server;

displaying the screen on the terminal;

displaying an object menu icon associated with the screen visibly at all times of the display; and

transferring user selection information to the server; and

the server responds back to the terminal with selection response information;

and wherein

the selection response information is localized and parsed by the server before the server responds back to the terminal.

37. (Previously Presented) The method according to claim 36, wherein:  
said object menu icon includes a plurality of icons, each associated with different objects on the screen.

38. (Previously Presented) The method according to claim 36, comprising:  
selecting objects from the screen using two alternative selectors.

39. (Previously Presented) The method according to claim 38, wherein:  
the selectors include a touch screen and virtual keys.

40. (Previously Presented) The method according to claim 36, comprising:  
marking a field of the screen with a focus marker to limit selection.

41-46. Cancelled without disclaimer or prejudice.

47. (Previously Presented) The method according to claim 31, wherein:  
the terminal is wirelessly connected to a network.

48. (Previously Presented) The method according to claim 36, wherein:  
the terminal is fixedly connected to a network.

49. (Previously Presented) The wireless system according to claim 33,  
wherein:

the at least one object menu icon causes an audio feedback to be played in  
the terminal when the at least one object menu icon is selected.

50. (Previously Presented) The wireless system according to claim 31,  
wherein:

the selection information is transferred from the terminal to the server by  
applying a browser application between a terminal and server connection.

51. (Previously Presented) The wireless system according to claim 31,  
wherein:

the selection information is processed into HTML format in the terminal  
before being sent to the server.

52. Cancelled without disclaimer or prejudice.

53. (Previously Presented) The method according to claim 36, comprising:  
selecting an information template and the server localizes and parses the  
selection response information to support a multiple size display of the terminal  
before the response is sent back to the terminal.

54. (Previously Presented) The method according to claim 40, further comprising:

applying a focus marker to the view of a mobile terminal of the system.

55. (Previously Presented) The method according to claim 36, further comprising:

selecting an information template and the server localizes and parses the selection response information so that a focus marker is supported for the terminal and added by the server before the response is sent back to the terminal.

56. (Previously Presented) The communication system of claim 31, comprising:

a service which is selectable from a service tab which is downloaded from a management server.

57. (Previously Presented) The method of claim 54, comprising:

a user interface style template used when the screen of a service is displayed which is downloaded from a management server.

58. (Previously Presented) A server device for processing responses, comprising:

- a request handler control which receives user requested data;
- a service control which creates a response template dependent upon a service to be provided to a terminal and information relative to a session connection between the terminal and the server device and user given information;
- a page generator which received the response template from the server control and the data, which are processed in the page generator according to a user profile; and
- a HTML control which receives a processed page from the page generator and sends a response to the terminal in a format of the processed page.

59. (Currently Amended) A The wireless communication system, of claim 31,  
wherein comprising:

- at least one wireless terminal;
- an access point in wireless communication with the at least one terminal and forming part of a network;
- a server connected to the network;
- the at least one wireless terminal includes a selector for selecting objects so that selection information is transferred from the at least one terminal to the server;
- and wherein
  - in response to the selection information being transferred from the at least one terminal to the server, the server responds back to the terminal with a page

template containing localization and component parsing performed by the server before a response to the selection information is sent to the at least one terminal;  
and

the localizing and parsing of the selection response information is performed by the server according to a user profile stored by the server before responding back to the terminal is performed according to a user profile stored by the server.

60. (Currently Amended) The wireless system of claim 31, wherein:  
a selection of the page template is performed according to a size of a display of the terminal and a capability of the terminal to support signalling protocol.

61. Cancelled without disclaimer or prejudice.
